RUNNlNG PARALLELS OF LATlTUDE. Parallels of latitude are curved lines, and they increase in curvature from the equator to the poles, and cross all meridians at right angles. All lines run at any angle from the meridian, by courses taken at short intervals, partake more or less (according to the angle) of the curvature of parallels of latitude. When the compass is set to a true east and west course, in any latitude, the line of sight is at right angles to the meridian, and in consequence of the spheroidical figure of the earth, which causes the curvature of the parallels of latitude, this line of sight will converge or the equator. Some correction is therefore due to each course taken between tt0tions, to keep the line on the some parallel of latitude. This correction, however, is...
