PETRI NET APPROACHES FOR MODELLING AND VALIDATION

LINCOM, 2003. Softcover. Book Condition: Neu. Dust Jacket Condition: Gut. 1. Auflage. The successful realization of complex systems of interacting and reactive software and hardware components relies heavily on the use of a precise language at different stages of the development process. Petri nets are becoming increasingly popular in this area, as they provide a uniform language supporting the tasks of modelling, verification, and validation. Their popularity is due to the fact that fundamental aspects of causality, concurrency, and choice are captured by Petri nets in a natural and mathematically precise way without compromising readability. Several methods, techniques, tools, and algorithms have been developed to ease the practical work and support the basic ideas behind the usage of Petri nets in the area of system engineering. However, this does not mean that complete and ready to use systems and approaches are available or even established. Therefore, a general understanding of the potentials of Petri nets in the context of system engineering needs to be provided and distributed. The workshop "Petri Nets in System Engineering" (PNSE'97) was held at the Department of Computer Science, University of Hamburg on September 25--26, 1997. It brought together experts from the communities of Petri nets and system engineering both from industry and academia to exchange the newest results and experiences. The workshop was organized by the members of the European community project MATCH (Modelling and Analysis of Time Constrained and Hierarchical Systems). Project partners include the universities of Eindhoven, Genova, Hamburg, Paris, Turin, Vienna, and Zaragoza. This post-workshop book puts together some papers presented at the workshop which were rewritten and then selected after a second reviewing process. The selected approaches cover modelling, verification, and validation. They provide an insight into new ideas of modelling and validation with modules or objects and a comparison of...
