Publication Des Manuscrits de Charles Fourier Annee 1851- (1-2)

Filesize: 3.17 MB

Reviews

A brand new e book with a new perspective. I could comprehended every little thing using this written e publication. I am quickly will get a satisfaction of reading through a written ebook.
(Clemmie Rolfson)

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 46 pages. Original publisher: Seattle, Wash. : Pacific Marine Environmental Laboratory, U. S. Dept. of Commerce, National Oceanic and Atmospheric Administration, Oceanic and Atmospheric Research Laboratories, 2004 OCLC Number: (OCoLC)318607501 Subject: Ocean currents -- Pacific Ocean -- Measurement. Excerpt: . . . Subsurface ADCP Data in the Equatorial Pacific 11 shift in the backscattered acoustic energy from a range set to be 0. 5 m to 2. 0 m vertically from the instrument. The beam-direction velocities, com-puted from the measured Doppler shift for each beam, are converted to earth coordinates using the relative transducer orientation and a Precision Navi-gation compass. The Argonaut-MDs were generally set to collect data once persecondfor180secondsata600-secondinterval. Thetheoreticalaccuracy 1 of the Argonaut-MD velocity measurement is 1. 8 cm s and the compass is 2. 0. Early tests by PMEL indicated that the Argonaut-MD measurements compared well with coincident ADCP velocities, but later comparisons re-vealed that the Argonaut-MD horizontal current speed was biased low (Fre-itag et al. , 2003). Investigation revealed that the bias was due to the inabil-ity of the Argonaut-MD compass tilt-sensor (Precision Navigation model TCM2) to function properly on moorings deployed in high current regimes where the instruments experience extreme lateral and rotational accelera-tions. Beginning in 2001, PMEL began to attach vanes to each instrument to reduce the acceleration of the current meters on the mooring lines. Subse-quently, dierences between ADCP and Argonaut-MD measurements have been comparable to those found between ADCP and MCM measurements. Vanes were attached to the Argonaut-MDs at 0, 110 W beginning in April 2001 for 7 months, coincident with a nearby, yearlong ADCP deploy- ment. The next deployment of Argonaut-MDs at 0, 110 W was also coinci-dent with the ADCP deployment, but the Atlas...
