As house pests they are troublesome from their presence merely in their efforts in the fall to find safe hibernating quarters and occasionally in their spring migrations in search of suitable breeding grounds. Origin and Distribution. Attention was first drawn to this mite in 1879, at Washington, D. C., from its occurrence on the trees in the department grounds and also on clover on lawns. It has since been reported from numerous localities, from Massachusetts to California. Northward it occurs in the east in northern New York and Canada. East of the Mississippi it has not been reported in the southern tier of states, the southernmost records occurring in Tennessee and North Carolina. On the Pacific coast it is known from San-Diego, in California, to East Sound, in Washington,...
