The data has been collected from monographs, Government bulletins, papers read before medical and pharmaceutical societies, and also from laboratory notes containing the results of the author s original research and observations. Much of the original data was previously contributed in the form of papers to several national and state medical and pharmaceutical societies, including the American Therapeutic Society, The American Medical .Association, The American Pharmaceutical Association and The Pennsylvania State Pharmaceutical Association. The authors of much of the information on the biochemic assay of drugs appearing in the literature assume that the readers are familiar with the apparatus and technique of the subject. In other words, the literature is written for experts rather than to teach beginners. There is, therefore, a field for a work explaining in detail the methods and apparatus employed for pharmacodynamic standardization. Such a volume is demanded by the rapid advance in the scientific knowledge of drugs as therapeutic agents. It is commencing to be realized by physicians that drugs should be instruments of precision. Chemical assay and standardization is sufficient to render them so when they contain active principles of such character as to permit their identification and isolation in the pure form by chemical methods. But there is another class of drugs not amenable to chemic standardization. Such drugs as digitalis, ergot, cannabis indica, etc., do not lend themselves to standardization by chemical methods....
