The Volume Thermodynamics of Liquids (Paperback)

By Carl Barus

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1892 Excerpt: .at the same position from which Dupre and LeVy originally started. However, too much care can not be taken in keeping clearly in mind that pressures which, in relation to the usual laboratory facilities, are exceptionally large, may yet be mere vanishing increments when mapped out on the scale of the molecular pressures of liquids and solids. Some notion of the internal pressures encountered may be gained as follows: Studying the compression of organic substances throughout an interval of 310 and 600 atmospheres, I found that the isothermal compression v/ Fcould be well represented by an equation v/V=ln (l+op)/ where # and a are constants and p denotes pressure. Taking this as a basis, I sought the mean values of the constants involved in some fiftythree isothermals, and found--v/V=hi (1+9A)1/9 to apply within the limits of error of my work. To this extent, therefore, compressibility increases...
